

WEB3 SERVICES & APIS FOR BLOCKCHAIN DEVELOPERS

Build, test and scale Web3 applications on blockchain with our library of developer friendly APIs and services.

PROBLEM

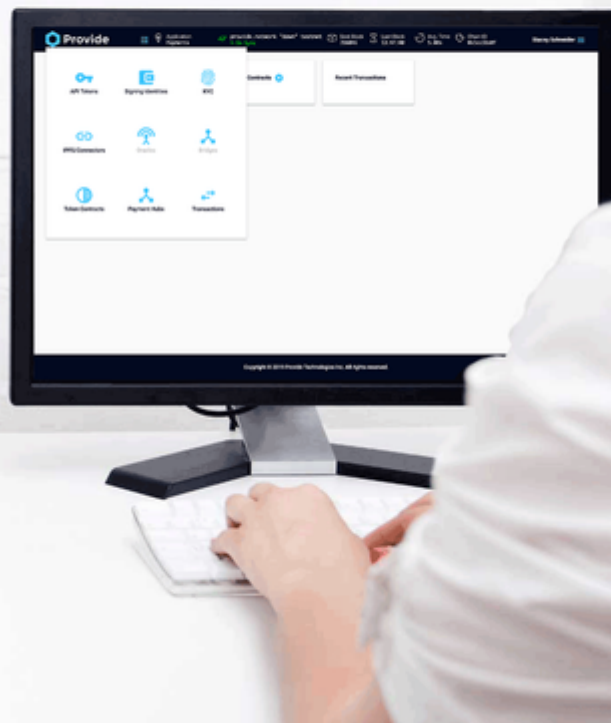

Blockchain is part of the bigger Web3 movement to modernize the internet. Blockchain applications will not work in isolation, and organizations today struggle with the skills, time and expense to prototype, build and integrate blockchain with the rest of their applications.

PROVIDE'S MULTI-LEVEL SOLUTION

Provide creates a developer environment with access to a library of easily customizable services and APIs necessary to build modern Web3 applications using blockchain.

For key business processes, Provide is building end-to-end turnkey solutions with these components, complete with competitive rates for backing services like payment processing and KYC validation. The first solution is Provide Payments.

Provide Payments is a modern payment rails solution that intelligently connects supply chain with very low cost settlements, creating transparency across the supply chain and dramatically reducing efforts for reconciliation and audits.

BENEFITS

Business value. Provide cuts 60-90% of the time out of building blockchain prototypes.

Cloud- & chain-agnostic. Provide aims to be the connective tissue across clouds, blockchains and applications.

Modern developer experience. From programmable REST APIs in a variety of languages to SDKs with UIs, Provide makes blockchain accessible.

SERVICES

- Node Orchestration
- Smart Contracts API
- IPFS Connectors
- Oracles
- *Bridges (coming soon)*
- Signing Identities
- API Tokens
- Token Contracts
- Transactions
- KYC API Gateway
- Payment Hubs
- Payment Channels

Provide Technologies

107 Technology Pkwy NW, Suite 215
Peachtree Corners, GA 30092
